Career All-Time  
Top 10 Finishes

**V-mass 350 PLUS**

Improve your driving distance and accuracy with Yonex V-mass technology. Scott Hoch did. During the 2001 PGA Tour season, it improved his driving accuracy 57% and his total driving ranking an amazing 41%.\*

The V-mass 350+ driver's Yonex-designed UL-Titanium™ shaft with its strategically-positioned titanium strands increases your clubhead speed up to 12% at point of impact. The 330cc head with pressed tungsten insert and deeper center of gravity delivers explosive power for increased distance. While the exclusive Power-Wave™ face provides a 10% larger sweet spot for enhanced control with no loss of distance or accuracy when hit off-center.†

So can your game benefit from V-mass technology? If it could help one of the tour's most consistent players, imagine what it can do for you.
