

Don't swing harder.  
Swing faster.

An evolution in graphite technology adds up to 5mph and 20 yards.

**CYBERSTAR  
NANOSPEED**

Our big news starts on a very small scale. Atomic, to be exact. The labs at Yonex have engineered a lighter, stronger carbon graphite by manipulating atoms and molecules. Our proprietary Dual Nanoscale Technology has allowed a shaft that is lighter and stronger than conventional graphite, and a clubhead with a lower and deeper center of gravity. So you get increased clubhead speed, higher trajectory and reduced spin for more distance. It's the breakthrough you'd expect from the company that invented graphite technology. Try our new Cyberstar Nanospeed driver and make a breakthrough of your own. For more facts, visit [www.yonex.com](http://www.yonex.com).
