YONEX INTRODUCES THE NEW CYBERSTAR UTILITY WOOD
-A New Family of Hybrids Designed to Deliver-

Torrance, CA – January 25, 2005: The Yonex Corporation announces the introduction of the new **Cyberstar Utility Wood**. The Utility will be added to the successful Cyberstar product line, featuring UL-Titanium™ composite shaft technology used exclusively by Yonex. The clubs will be available as #U3 (15° loft), #U5 (18° loft), #U7 (21° loft) and #U9 (24° loft) and will sell for a MSRP of \$250 each.

The **Cyberstar Utility** features a “Hot” Maraging Steel clubface for a higher and more penetrating ball flight for greater distance and more accuracy. The Tour inspired design, size and shape of the **Cyberstar Utility** significantly reduces club head twisting in all “rough” lies making the **Cyberstar Utility** easier to play even from the most difficult playing conditions.

“Tungsten Balanced” weighting in the clubhead is designed to provide additional head stability on mis-hits. This technology deepens and lowers the center of gravity for a higher initial launch angle.

The **Cyberstar Utility** is designed to help golfers of all skill levels hit longer more consistent shots with ease, encouraging the replacement of those “hard to hit” long irons.

The **Cyberstar Utility** comes equipped with a “Supercharged” UL-Titanium Graphite Shaft specifically designed for “Utility” or “Hybrid” golf club heads.

Yonex has incorporated strands of UL-Titanium strategically positioned within the shaft to deliver ultimate power. UL-Titanium is a nickel/titanium alloy that **is 3 times stronger than titanium and 2 times more resilient than graphite!**

If you hold a UL-Titanium fiber and pull it, it stretches. Release the fiber and it immediately “snaps back” to its original shape, transferring maximum energy to the ball.

For more information on the Yonex product line or to find a local retailer that carries that Yonex line, please call 1-800-44-YONEX.

Specifications: Cyberstar Utility

	Shaft Flex	Loft	Lie	Length
#U3	S, R, SL	15°	59°	42"
#U5	S, R, SL	18°	59.5°	41.5"
#U7	S, R, SL	21°	60°	41"
#U9	S, R, SL	24°	60.5°	40.5"

- Crown Material Precision Cast Stainless Steel
- Head/Body Material Precision Cast Stainless Steel w/Tungsten Weight
- Face Material Maraging Stainless Steel
- Shaft Material Proprietary Yonex UL-Titanium Graphite
- Shaft Flex Stiff, Regular, Super Light (Senior)
- Left-Hand Not Available
